Your 1-Page Plan
Vizdale Full-Stack Developer Internship

Your Name	JOTHILAKSHMI M R
Project	ClientLocker
Client	Vaigai Vel & Associates — an accounting firm in Madurai
Who will use it?	Partners, assigned staff, clients, and auditors who can view files for exactly 2 assigned clients.
Your How Might We, in your own words	How might we organise each client's tax forms and bank statements in one private place, while making sure only approved people can view or open them?
Your tool in one sentence	A role-based document locker for securely storing and accessing client tax forms and bank statements, with expiring links and a partner activity log.

#	5 things a user can do
1	Log in and enter the workspace for their role: Partner, Staff, Client, or Auditor.
2	View only the client list and tax or bank documents allowed by their access.
3	Upload a made-up PDF, JPG, or PNG tax form or bank statement (partners and assigned staff only).
4	Create and open a secure file link that expires after 10 minutes, with access checked each time.
5	Give or remove staff access and review the newest activity records (partners only).

Your AI feature	Own Trained - AI Feature
Main screens	Partner: all clients, each client's files and checklist, access management, and activity log. Staff: assigned clients, their files, checklist, and upload. Client: own files only. Auditor: files for exactly 2 assigned clients, with no upload option.
Made-up data you will use	1 firm; 2 partners; 6 staff including 1 trainee; 10 clients; 5 checklist items for each client; 1 auditor assigned to exactly 2 clients; fictional PDF, JPG, and PNG tax forms and bank statements.
What worries you most?	Making sure staff and auditors cannot access unassigned clients; checking permissions on every endpoint and every file link; blocking an old link immediately after access is removed; and keeping the activity log accurate and uneditable. The system must still work if AI is unavailable.
